

PowerSoftMD Lab Results-Only Interface Steps

1. Lab Company technicians must review PowerSoftMD HL7 specifications available at: www.powersoftmd.com/technote/PowerSoftMDHL7LabSpecs.pdf

We do not make custom modifications.

2. Schedule a conference call with between the labs technicians and our technicians to review the list created in step 1 created by lab.
3. Data Tec will invoice the lab the setup fee of **\$2500** (for 1st doctor, **\$400** for each additional doctor). This fee **must be paid before** Data Tec proceeds.
4. Fill out the Lab Interface Information available from our web site at: www.powersoftmd.com/technote/LabInterfaceInfoSheetResults.pdf

5. Pay the interface set up service fee of **\$2500** for 1st doctor, then **\$400** per additional doctors.

6. **Lab Company will set up communications** with the clients network for the Lab Results folder. The Lab Result folder must reside on the same shared drive that the PowerSoftMD data folders reside on (i.e. H:\, P:\, etc..) Data Tec does not install or support communication links or communication software, we only pick up results from the shared drive locally.

The Lab Company will also provide the doctor's office any training required to keep the communications link operational.

7. Data Tec will setup and install the required PowerSoftMD files and software.
8. Lab Company will send sample results to the shared folder. As noted in our Lab Specifications document, PowerSoftMD also supports separate or embedded PDF results file.
9. Data Tec will provide the client training on how to view and Import HL7 Lab Result files from the shared Lab Results folder.
